

Dear Tether Hiring Team,

It is a pleasure applying for the Software Engineer – Mobile Development position at Tether. I am a Software Engineer with 3+ years of experience in developing web and mobile applications in **React, React Native, TypeScript** and Node.js.

In my current job at Carrier, I have been involved in developing production-ready, large-scale React Native applications in relation to mobile features, **authentications, API integration, device connectivity flows**, accessibility work and React Native platform upgrades. In addition, I have also used **React Native Web** to create cross-platform applications and make the application scalable.

My relevant experience involves creating robust user-facing applications, performance optimisation, REST APIs, real-time data flows, testing methodologies and modern frontend tools. I have also created applications using **Nx monorepos** and **CI/CD** process with **CircleCI**.

The emphasis by Tether in secure and high-performance financial technologies and decentralised innovations really excites me, and I look forward to contributing my expertise in mobile technologies while gaining more experience in blockchain and fintech technologies.

Thank you for your consideration, and I would be glad to work for Tether.

Regards,

Vinod Kumar Nelanakula
